# Recommendation Letter

**To Whom It May Concern:**

It is a pleasure to write a recommendation letter for **Shahm Najeeb Al-Mobayedeen**. I have had the pleasure viewing Shahm's professional development over the past five years, while he trained in the National Institute for Robotics and Technology.

The NIRT program, was developed, optimized and conceived to the purpose of concentrating our youth's energy onto the emerging fields of Science, Technology, Engineering, and Math (STEM). Through a friendly, academic environment, the students are exposed to ideas and projects that are outside the scope of scholastic curriculums. Away from the traditional classrooms, we strongly believe that our courses spark the imagination of our kids, and forces out elements of critical thinking, creativity, and focus that are never developed in schools nowadays. Our hands-on, experimental approach to every concept given in the courses makes it possible for the kid to feel empowered, and in control of his or his learning curve. Which in turn nurtures confidence, responsibility, and intellectual autonomy at a younger age. Through the 10 levels, students are taught about electronics, robotics, electricity, mechanics, telecommunication, entrepreneurship, and much more. We expect our students to have fully completed an idea for an invention of his own work, with plans, structures, and presentations that will be assessed by his mentors by the end of the 10th level as a graduating project. Although that might seem farfetched, but nevertheless, we continue to believe in our kids' ability to think about things from a much simpler, focused perspective. Something, our industry lacks, and is in need of. We hope that through our program we nurture this generation of young NIRT, to excel at the graduate level, and spark up our industry in all directions.

CamScanner

Shahm finished the ten levels of NIRT program and now he is in working on his technical skills by participating in many advanced workshops and competition.

Shahm finished the ten levels of NIRT program as below:

Level 1: Introduction to Robotics 101.

Level 2: Advanced Robotics 102.

Level 3: Fundamentals of Electrical Circuits and Electronics 101.

Level 4: Fundamentals of Microcontrollers 101.

Level 5: Engineering Workshop and Machining.

Level 6: Advanced Microcontrollers 102.

Level 7: Mobile Applications and IOT.

Level 8: Computer Aided Design and Manufacturing (CAD/CAM).

Level 9: Computer Vision with AI.

Level 10: Entrepreneurship.

After completing these ten levels, Shahm is now preparing to proceed with the NIRT Graduation Project, where he will design, develop, and present his own innovative project as the final stage of his training journey.

Beyond his passion, Shahm is a natural leader, and works hard to achieve his goals. He demonstrates superior leadership and teamwork capabilities as he participated with his team in the Robotics Competitions.

Shahm is an active member of NIRT Program, he is always a part of any competition, he shows commitment, problem solving skills, and dedication to do great job.

CamScanner

Shahm has participated with NIRT robotics teams in many competitions and he achieve with his team many achievements:

1- Participated in the National Ball Collector Competition, 2019.
2- Participated in the National Ball Collector Competition, 2020.
3- Participated in the National Ball Collector Competition, 2021.
4- Best Programming Award, National Sumo Competition, 2021.
5- Participated in the HTU SUMO Contest, 2023.
6- Participated in the HTU SUMO Contest, 2024.

Based on my observation of his abilities, I strongly believe that he has the potential to be an outstanding student in developing projects. He clearly has the ability to achieve success with positive results.

Shahm has my highest recommendation, and if you need any further information, please do not hesitate to contact me.

Sincerely,

CTO

Eng. Zain Al-Samawi
